DSA 301 - questions not covered

Problems from the curriculum sheet that do not become their own challenge in the Classwork or Homework contest, and why.

Summary

	In sheet	Codeable	Own challenge	No match	Not coding	Shares one
Classwork	150	150	138	1	0	11
Homework	150	150	145	4	0	1
Total	**300**	**300**	**283**	**5**	**0**	**12**

So 283 of the 300 problems in the sheet get their own challenge. The remaining 17 are listed in sections 1 to 3: 5 with no match, 0 that are not coding problems, and 12 that share a challenge with an earlier problem. Section 4 covers a different risk: 0 problems that *were* added but whose match scored below 0.50 and is probably the wrong problem.

How the matching worked, and what that means for this list

Each problem was matched by comparing its wording against the 304 challenges this account (experience1) has authored. The public library was not searched, so a problem missing here may still have a public equivalent. That is a text-similarity guess, not an understanding of the problem, so a close score is evidence and not proof. Sections 1 to 3 are reliable - they record what is structurally absent. Section 4 is the judgement call.

1 No matching challenge found

Nothing in the searched libraries resembles these, so each needs a challenge authored by hand on HackerRank - statement, test cases and a reference solution - before it can appear in a contest. This is the shortest list and the only one that requires real authoring work.

Classwork - 1 problem(s)

ID	Day	Problem
`CW-D31-3`	LEC-31	LC509 Fibonacci Number

Homework - 4 problem(s)

ID	Day	Problem
`HW-D03-3`	LEC-3	Group anagrams together using map<string, vector<string>>
`HW-D32-1`	LEC-32	LC377 Combination Sum IV
`HW-D32-2`	LEC-32	LC279 Perfect Squares
`HW-D34-1`	LEC-34	LC120 Triangle

2 Not a coding problem

Paper exercises, readings and analysis tasks. No judge can grade these, so they are excluded from the contests by design and belong in class discussion or a worksheet instead. Nothing to fix here - this section is for completeness, so you can confirm nothing was dropped by mistake.

Classwork - 0 problem(s)

None.

Homework - 0 problem(s)

None.

3 Shares a challenge with an earlier problem

These matched a challenge that an earlier problem already claimed, and a contest can hold a challenge only once. Some are deliberate - the curriculum revisits Count digits on Day 12 and again on Day 24, so one challenge covering both is correct. Others are the matcher collapsing two genuinely different exercises onto one challenge; those want a distinct challenge, and the 'Already used by' column shows what to compare against.

Classwork - 11 problem(s)

ID	Problem	Challenge it maps to	Already used by
`CW-D14-3`	LC199 Binary Tree Right Side View	`classwork-lc199-binary-tree-right-side-view`	CW-D12-2 LC199 Binary Tree Right Side View
`CW-D16-2`	LC101 Symmetric Tree	`classwork-lc101-symmetric-tree`	CW-D14-2 LC101 Symmetric Tree
`CW-D30-1`	LC767 Reorganize String	`classwork-lc767-reorganize-string-3`	CW-D10-1 LC767 Reorganize String
`CW-D30-3`	Minimum cost to connect ropes (GfG)	`classwork-minimum-cost-to-connect-ropes`	CW-D28-3 Minimum cost to connect ropes (GfG)
`CW-D33-3`	Longest Increasing Subsequence in O(n log n) (GfG)	`classwork-lc300-longest-increasing-subsequence`	CW-D33-1 LC300 Longest Increasing Subsequence
`CW-D36-2`	LC416 Partition Equal Subset Sum	`classwork-lc416-partition-equal-subset-sum`	CW-D35-2 LC416 Partition Equal Subset Sum
`CW-D37-3`	LC322 Coin Change	`classwork-lc322-coin-change-1`	CW-D32-1 LC322 Coin Change
`CW-D40-1`	Matrix Chain Multiplication (GfG)	`classwork-matrix-chain-multiplication-gfg`	CW-D39-3 Matrix Chain Multiplication (GfG)
`CW-D46-1`	LC543 Diameter of Binary Tree (via DP)	`classwork-lc543-diameter-of-binary-tree`	CW-D13-2 LC543 Diameter of Binary Tree
`CW-D46-3`	LC124 Binary Tree Maximum Path Sum	`classwork-lc124-binary-tree-maximum-path-sum`	CW-D17-3 LC124 Binary Tree Maximum Path Sum
`CW-D49-1`	LC3 Longest Substring Without Repeating Characters	`classwork-lc3-longest-substring-without-repeating-characters`	CW-D07-3 LC3 Longest Substring Without Repeatin

Homework - 1 problem(s)

ID	Problem	Challenge it maps to	Already used by
`HW-D20-1`	LC129 Sum Root to Leaf Numbers	`homework-lc129-sum-root-to-leaf-numbers`	HW-D17-2 LC129 Sum Root to Leaf Numbers

4 Added, but the match is probably wrong

Nothing here. Every remaining mapping scored at least 0.50, so the weak matches an earlier pass produced have been cleared from the markdown and removed from the contests. The cost of that strictness is visible in section 1: the problems that were previously covered by a poor match now count as unmatched instead.

Classwork - 0 problem(s)

None.

Homework - 0 problem(s)

None.
